InnoTech

Design-rich drawer system for self-indulgent bathrooms

With InnoTech from bathroom to wellness room

Bathrooms have undergone a transformation. From often bleak and purely functional rooms, they have become a central element in a contemporary lifestyle. As a personal wellness zone, today's bathrooms offer relaxation, recreation and health.

In consequence, user expectations for bathroom storage units are changing fast. Bathroom storage needs to keep pace with the rest of the home in terms of quality, design and functionality. This means drawers that are the optimal blend of design, comfort and functionality – InnoTech from Hettich.

InnoTech quality is apparent at first glance. The double-walled drawer boxes and the concealed runners add immensely to the value image of the whole piece of furniture. The double powder-coated, silver surfaces are extremely scratch-resistant and won't show fingerprints. Fine design and easy care only add to the wellness experience.

Full extension for ease of use

InnoTech stands for excellent ergonomics, for example, with full extension drawers instead of doors or part extension drawers. It makes all the difference to have a clear overview and easy access to everything in the drawer. InnoTech creates a feeling of wellness in the bathroom.

Long life with Quadro runners

Perfect drawer action – day by day, year in, year out. Mounted on rugged, long-lived Quadro runners, InnoTech drawers will run smoothly, virtually for ever. Outstanding engineering is what makes this tried-and-tested runner system so long-lived. And with integrated Silent System for damped closing, the bathroom becomes a cocoon of quiet.

2

Styled with flair - inside and out

With InnoTech, bathroom design can be carried through behind the front panels. Because InnoTech offers a range of choices for decors, for materials, and for retrofittable TopSides and decor profiles. As a modular, freely configurable system, InnoTech can be personalized to match users' dream of a personal wellness zone.

Gaining space with flexible organizer systems

When every centimetre counts, InnoTech's adaptable organizer system for drawers and pull-outs scores top marks. The intelligent divider elements let consumers make optimal use of the available space – with the extra bonus of a clear overview and fast access. Small or big – everything you need and use in the bathroom can be perfectly organized.

Feeling good with harmonious, end-to-end design

Decor profiles - spoilt for choice

InnoTech makes it possible to carry the design right through to the back of the drawer.

InnoTech decor profiles, for instance, in chrome look, make it easy to harmonize the drawer box with the whole ambience of the bathroom. Or to add a lively contrast. It only takes a moment to glue a decor profile onto the drawer box, so they're ideal for retrofitting. The last word for a harmoniously styled bathroom is matching dress caps in a gleaming chrome look.

With InnoTech, bathroom design is expressed and also experienced in many different ways. This is because InnoTech drawer systems combine design and functionality. As a modular, freely configurable system, InnoTech introduces design-oriented ideas that make drawers a key element in bathroom storage solutions.

Inside drawers - unique space bonus

A perfect combination of design and function. Adding an elegant inside drawer behind the streamlined front panel creates extra storage space, while maintaining the overall smooth and harmonious look of the whole bathroom. Adapters in an aluminium or stainless steel finish continue the story of end-to-end design right through to the drawer details. Front panels for the

inside drawers can be highly individual using different materials. The use of glass fronts is an especially attractive combination.

TopSide variants for coherent and attractive designs

Good design covers every detail. TopSides continue the attractive InnoTech design ethos right through the drawer.

TopSides made of translucent plastic not only look serene and airy, they shed light on drawer contents.

A universal adapter makes it possible to choose the TopSide that harmonizes with the bathroom design. Especially attractive are TopSides made of glass.

Variable organizer elements for ultra-tidy drawers...

Keeping things tidy can be really simple. With the right organizer elements, every item has its place, storing and retrieval are equally easy. Every centimetre is used efficiently, because the attractive InnoTech organizer elements fit exactly. And they can be positioned and repositioned as required to produce big or small compartments. InnoTech creates tidiness and harmony in bathrooms.

Easy, efficient organization for wide pull-outs

Store bottles, tubes, towels - and almost anything else securely and efficiently.

Perfect space for odds and ends

InnoTech inserts make special space for small items. Compartment size can be varied individually. The drawers are easy to clean ensuring optimal cleanliness and hygiene.

...and ideal storage for bathroom items

OrgaFlex - more space for ideas under the wash basin

OrgaFlex undersink drawers are a brilliant way of optimizing storage space under the wash basin. The sliding containers can be simply lifted out and taken where they're needed. They're the ideal hygienic storage for cosmetics and bodycare items. A tray in front of the containers has space for taller items like cleaning fluids or bath salts.

Rugged drawer runners with super-smooth action are the basis for long-lived functionality. Quadro drawer runners have set quality standards for many years. With load capacity up to 50 kg, Quadro runners guarantee that even large, heavily-laden drawers glide smoothly and silently. The precision steel ball bearings and the unique self-cleaning principle guarantee smooth, dependable drawer action even after years of use in a humid bathroom environment.

Quadro runners – at the core of a quality drawer

Silent System and the luxury of quiet

Quiet is relaxing. It reduces stress. Especially in the bathroom, you want to shut out irritating and jarring noises to create a mood of intense relaxation. Even small noises can spoil the harmony. Silent System damped closing helps create the luxury of quiet. Drawers are braked over the final centimetres, so that they close gently and noiselessly. It all adds to the wellness experience.

Fast, easy assembly and adjustment

It couldn't be simpler: Drawer installation/removal

- Simply position the drawer on the runners and slide in
- Two snap-on connectors automatically clip the drawer onto the runner
- There's no risk of unintentional unlatching
- Easy drawer removal: press the release buttons and slide the drawer forwards

Fast and precise: Adjusting the drawer front panel

- Toolless, precise thumbwheel height adjustment ±2 mm
- Equally easy: Toolless side gap adjustment ±1.5 mm

Easy and precise: Adjusting a pull-out front panel

• Toolless adjustment of front panel angle by simply twisting the railing rod

Product information

Application areas

Hettich drawer and pull-out systems are suitable for residential, kitchen, bathroom and office furniture for private, commercial and institutional use.

Load bearing capacity and safety

Load capacity as specified in the catalogue (to DIN EN 15338) is the weight of the drawer together with the weight of the contents in kg.

All Hettich pull-out systems have a safety catch to prevent accidental detachment/roll-out prevention and comply with the strength and durability requirements of DIN EN 15338.

If installed correctly, the pull-out systems are suitable for furniture that complies with DIN 14749.

The maximum front panel height depends on the material, the drawer dimensions and the selected runners. Please contact Hettich if you would like more information.

Corrosion testing

Hettich drawer and pull-out systems comply with DIN EN 15338 for corrosion resistance, 72 hours condensed water test to DIN EN 6270.

Additional information

On condition of using acceptable particleboard quality – screw tearout strength as per DIN EN 320 (>1000 N) – we recommend the use of Euroscrew \emptyset 6.0 x 14 mm or countersunk panel screw 4.0 x 16 mm inserted in accordance with the hole patterns shown in the catalogue. Attachment methods that do not comply with the specifications must be tested by the furniture manufacturer.

General conditions of business

All sales and services are supplied only in accordance with our General Terms of Sale and Delivery. You will find the details on our website www.hettich-agb.com.
