Silent System Flexible

A calm and soothing environment is the first essential for relaxation and well-being. Especially in bedrooms. Peace and quiet is now available on demand. Thanks to a new version of Hettich's standard fitting for sliding door damping. Silent System Flexible adapts to small and big sliding doors and can be installed in new or retrofitted in existing furniture.

Integrating peace and quiet into sliding doors

Silent System Flexible offers an easy upgrade option for sliding door units. Damped closing, with self-closing, is a flexible way of adding extra comfort. Installation is so easy that end users can fit the dampers themselves. Once installed, the damping device is unobtrusive and virtually dustproof. The system adapts to any door weight from 20 to 50 kg. There's no need to alter the design of cabinets and doors in any way. The extra comfort is impressive – doors glide open and shut with barely a whisper. Silent System Flexible helps to create a calm and soothing mood – and it works perfectly in lightweight furniture too.
